Build Your Own Computer -- perfect for electronics hobbyists

By Prof380

Although I originally wrote this book as a supplement to a college level electronics course, I have been pleasantly surprised at the number of hobbyists who have purchased the book and built their own computer. You don't have to be an electronics student to build this circuit. I heartily recommend this book to anyone who likes electronics projects. I will be more than happy to answer any of your questions at walter@irishjava.com.
