Review

"From its beginnings, psychoanalysis has been interested in the relationship between the mind and the body. However, Freud's attention to pathology focused on psychopathology, with little interest in somatic disorders. Others ? particularly Alexander ? have attempted to develop theories of psychosomatics, but it was particularly the Paris school, and Pierre Marty, who developed a truly psychoanalytic theory of psychosomatics. This volume provides an important introduction, summary and critique of that work, and also offers perspectives on it from around the world. Beginning with a paper by André Green that was originally written as his contribution to a debate with Pierre Marty that never occurred due to the latter's death, it continues with five papers from Paris and five from England, Latin America and North America. They provide theory, clinical reports and contrasting approaches. I know of no finer introduction to contemporary psychosomatics." (Robert Michels, MD, University Professor of Medicine and Psychiatry at Weill Cornell Medical College and Training and Supervising Psychoanalyst)

"Psychoanalysts work more and more with patients presenting psychosomatic disorders. Present day descriptive and classificatory psychiatry tends to see only one clinical frame under the confusing term of somatisation. But since Freud, psychoanalysis has helped us to understand the complexity and the diversity of psychopathological organizations which may have somatising consequences (conversion hysteria, essential depression, functional disorders, hypochondria, etc). The book which Marilia Aisenstein and Elsa Rappoport de Aisemberg present here, gives us a modern view in direct line with all the previous researches, showing us how we can rethink this plurality. Authors who have found their main source, either in the Paris Psychosomatic School, or in the long tradition of South American studies, mainly in Argentina, all bring in their own manner an original theoretical reflection on this subject. The reader will also profit from their very interesting clinical cases. This book throws a new light, of great interest, on a field where there have been few recent publications." (Daniel Widlöcher, Past President)

PSYCHOSOMATICS TODAY: A PSYCHOANALYTIC PERSPECTIVE (PSYCHOANALYTIC IDEAS) FROM KARNAC BOOKS PDF

This book, composed of a collection of articles on present-day psychosomatics, proposes to be both contemporary and thoroughly Freudian. The object is to present in it representatives of the major currents initiated by the pioneers in the field of psychosomatics. The contributions that they offer are all theoretical and clinical, original and personal, and each one of the contributors figures in his own particular framework. It has often been said that Freud was not interested in psychosomatics, he rather showed some ambivalence in tackling this subject, he nevertheless extensively studied the different states of the body. All his papers concerning corporal expressions are in the line of his theoretical concern relating to drives. Studying Freud's oeuvre, one can describe four kinds of somatic symptoms: conversion hysteria symptoms; the somatic symptoms of the actual neurosis; hypochondriac symptoms, and organized organic ailments.

Contributors: Madeleine Baranger, Catalina Bronstein, Cláudio Laks Eizirik, André Green, Lila J. Kalinich, Ruggero Levy, Evelyne Sechaud, Claude Smadja, Gerard Szewc, Graeme J. Taylor.
